

Hatch (🔧) — Top-Level Platform Architecture

A Derived Architecture: Single Process, Single Memory Space, Event-Driven

APPLICATION

CORE SERVICES

ROBOT SYSTEM

VISUALIZATION

USER INTERFACE

DATA & ASSETS

*Space is the TransformRegistry. | Time is the StateChannel. | Movements are models. Pure Python. | The UI separate from services. | One robot, one session.
Individuals before groups. | A single process, single memory space. | Event-driven, no polling. | The visualizer as a mind-prying tool — see everything, hide nothing. | Everything in URDF.*
